

Asset Management Services

Asset Management Services

Prysmian provides its customers with a comprehensive offer of services and activities, aimed at optimising a network's Total Cost of Ownership, which range from feasibility studies to network changes impact assessment, from installation to maintenance interventions, either planned or due to an emergency. Far from the static image that may stem from a first and surface analysis, a network is, indeed, a complex and dynamic structure, which undergoes continuous evolutions. The change in energy needs - both in terms of quality and of quantity - has a sometimes heavy impact on a network and requires increased power and

reliability. Prysmian provides its customers with a valuable support not only to the evaluation and exploitation of the operating margins of the assets currently in service, but also to the study and implementation of possible network changes and extensions. This is the Asset Management Services operative scenario: an array of modular services, tailor-made to meet customers' needs, which can be applied to any cable system asset, either originally supplied by Prysmian or any other parties, and can be interfaced with the wide range of installation solutions offered by Prysmian.
